PARTS

Illustration of parts and their printing orientation.

RING

RING SEGMENTS

MAIN RING SEGMENT ASSEMBLY

Using a soldering iron, carefully heat and press in the following Ruthex threaded inserts:

CONNECTING THE RING SEGMENTS

The segments are connected to each other with a click system.
Simply push them together until you hear a click.

TYPES OF INNER RING SEGMENTS

Inside the main ring there is an additional inner ring.
It not only strengthens the entire structure,
but also prevents light from the LEDs from leaking through the joints.
It also creates a groove for the diffuser.

INNER RINGS SEGMENTS

Place an inner ring segment between the joints of the main ring.

Secure them with screws M3x12.

At the positions where the camera legs are mounted,
use the inner rings segments with a holes:

Tip: If your LED strip is with a soldered connector (d_{max}=Ø12mm), you must first thread the connector through the inside of the ring before inserting the inner leg ring segments.

LED LIGHT

LED STRIP
POWER SUPPLY
CABLE

Max. width of LED strip **13mm**
Strip length around the circle **2,3m**

Example LED strip used:

| | |
|---------------------|----------------------|
| Lumens/LED: | 24-26lm |
| Lumens/m: | 1320lumens |
| SMD: | 2835 |
| LEDs/M: | 120pcs |
| Beam Angle: | 120° |
| Strip Width: | 10mm |
| CRI: | 80 |
| Current/m: | 1A |
| Volatge: | 12V DC |
| Protection: | IP20 |
| Color Temp.: | Day White (4000K) |

CAMERA LEG ASSEMBLY

Using a soldering iron, carefully heat and press in the following Ruthex threaded inserts into the camera leg upper part.

Insert the USB camera cable through both leg parts.

Compatible USB camera

Camera model:

USB OV9732 100 Degree Camera Module 1MP

Tip: For better cable management during the assembly is recommended to have slide PH connector on camera PCB

Info: Printed model is also compatible with top entry PH connector type.

Connect the USB cable to camera PCB and secure them with 2x M2x4mm.

Use 4x M3x12mm screws to mount the camera cover.

CAMERA LEG UPPER PART

Insert the two clips on the upper leg
into the lower leg

CAMERA LEG LOWER PART

CAMERA
USB CABLE

POWER SUPPLY
CABLE

Section view of the camera leg and ring,
showing the internal cable routing.

Attach all three assembled camera legs
to the ring using M4x16 screws.

2x/per leg
screws M4x16

LED DIFFUSER

After assembling the entire ring and installing the LED strip, you can cover the lighting with a diffuser.

The material should be transparent (ideal is PETG)
so that the light is not significantly dimmed.

We created a two-colour model, because during design and testing
we found that light could travel through the diffuser to the edge,
which may be distracting for some 9-darters 😊.

Important: If you print the diffuser only in one color, the light will travel through it to the edge,
and you will see the joints of the segments. We recommend to print the diffuser in two-color.

GROOVE

12x
DIFFUSER

Between the outer and inner rings
there is a groove running around
the circumference for the diffuser.

Insert one end of a diffuser segment
into this groove and push it
all the way around until it fits.

Push the diffuser around the inner edge with your fingers.
You should hear a soft “click”.

Once inserted, the diffuser not only covers the LED strip
but also strengthens the entire ring.
The complete diffuser consists of 12 parts.

AUTODARTS CAMERA POSITIONING

You have two options where must be placed cameras around the dartboard.

Camera positioning tip no. 1
Camera aligned with dartboard segment 11

Camera positioning tip no. 2
Camera aligned with dartboard segment 6

DARTBOARD SURROUND

Maximum outer diameter of the surround: **67,5cm.**

MINIMUM BASE BOARD SIZE

Minimum size of the base board on which can you place a ring with legs: **80x76cm.**

SCREW COVERS

Each leg includes two caps to cover the mounting screws.
Pay attention to the markings **I** and **II** on the caps and the legs.

Insert the small pins on the cap into the corresponding holes in the leg and press it in.
If you need to remove the cap, use a screwdriver in the small opening on the side of the leg.

Important: We recommend using screws with a half-round head, thread diameter size $\varnothing_{\max}=4.5\text{mm}$.
If the screw heads are too large, the caps may not snap on properly.

LIST OF COMPONENTS

| | | |
|------------------|---|--------|
| Ruthex RX M2x4 |  | 6 pcs |
| Ruthex RX M3x5,7 |  | 30 pcs |
| Ruthex RX M4x8,1 |  | 6 pcs |
| Screw M2x4 |  | 6 pcs |
| Screw M3x12 |  | 30 pcs |
| Screw M4x16 |  | 6 pcs |
